Show

Accessibility

These checks highlight opportunities to [improve the accessibility of your web app](#). Automatic detection can only detect a subset of issues and does

not guarantee the accessibility of your web app, so [manual testing](#) is also encouraged.

NAMES AND LABELS

▲ Form elements do not have associated labels

These are opportunities to improve the semantics of the controls in your application. This may enhance the experience for users of assistive technology, like a screen reader.

AUDIO AND VIDEO

○ <video> elements contain a <track> element with [kind="captions"]

These are opportunities to provide alternative content for audio and video. This may improve the experience for users with hearing or vision impairments.
